**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 14-25 are allowed.
2. The following is an examiner's statement of reasons for allowance:

U. S. Patent No. 6,208,147 to Yoon et al. in view of U. S. Publication 2004/0021448 to Bluemel et al. are references closest to the claimed invention. Yoon et al in combination with Bluemel et al. disclose Yoon et al. in combination with Bluemel et al. disclose a method for evaluating a capacity of secondary batteries of a same group produced under same conditions, the method comprising: partially charging the secondary batteries to have a charge capacity of at least 60% with a voltage less than a full charge voltage; measuring an impedance spectrum for the batteries partially charged; and determining the capacity of a battery by comparing a model parameter predefined according to an impedance function approximation algorithm with the capacity of the battery measured by the real time discharge method. However, Yoon et al. in combination with Bluemel et al. do not teach determining specific internal resistance components from an equivalent circuit model fitted from the measured impedance spectrum to perform a numerical operation; and comparing the numerical operation value of the resistance components with an initial discharge capacity graph of the batteries to evaluate an initial discharge capacity of unknown batteries of the same group; and including all of the other limitations in the respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
